

New Jersey Department of Health and Senior Services Communicable Disease Service

Respiratory Virus Surveillance Report Week ending October 8, 2011 (MMWR week 40)

SYNOPSIS

State Activ	ity Week ending 10/8:	Susses of a person of the pers
Current w	veek Last year: LOW	Hunney Grand Wall Adam get Main
Ro	egional ³ Data	The state of the s
Northwest	LOW	No. Carlo
Northeast	LOW	Salem
Central West	LOW	Cumberland
Central East	LOW	
South	LOW	

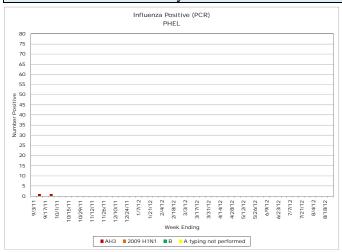

ILI Activity						
	Perce	Baselines				
	Current week (range by county)					
Long Term Care Facilities	0.63 (0-1.55)	0.82	0.60	0.64 (0.66, 0.89)		
Schools (absenteeism)	3.18 (1.63-6.20)	3.64	3.65	4.32 (4.86, 5.21)		
Emergency Departments	2.12 (0-4.43)	1.63	2.27	2.68 (3.37, 3.89)		

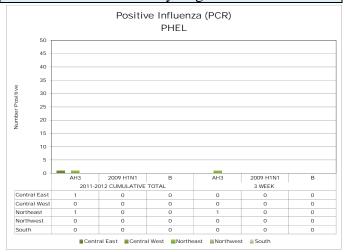

Viral Activity ⁶					
	Current	Past 3	Cumulative		
	Week	Weeks	Total		
Influenza H1N1 (2009)	0	0	0		
Influenza H3N2	0	0,	0		
Influenza B	0	0	0		
Respiratory Synctial Virus (RSV)	7	7	7		

Report also available at: http://nj.gov/health/flu/fluinfo.shtml

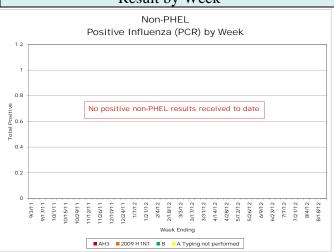

Virologic Surveillance⁶

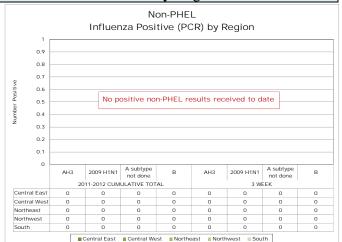

NJ Public Health and Environmental Laboratory (PHEL) Influenza Positive (PCR) Result by Week Result by Region³

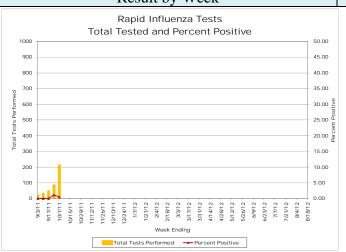

Influenza Positive (PCR) – Commercial/Acute Care Laboratories Result by Week Result by Region³

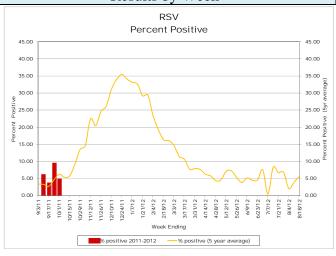

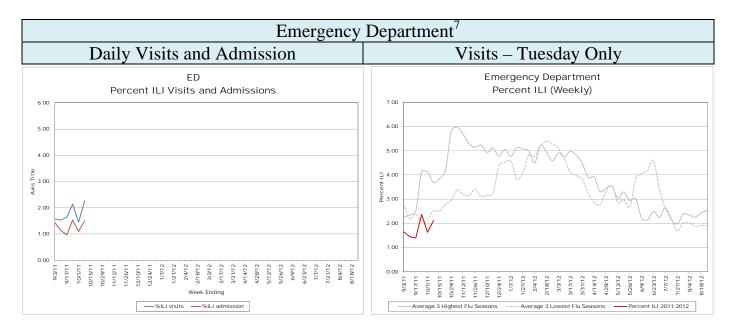

Influenza Rapid Antigen Result by Week

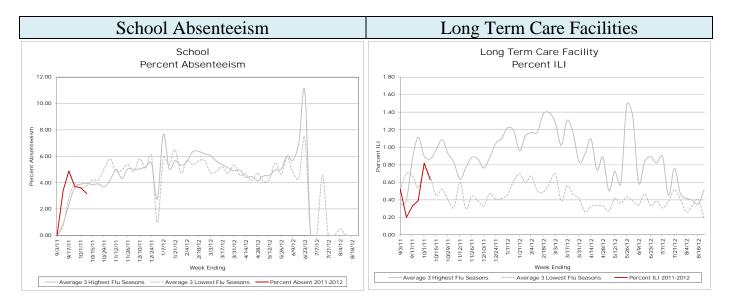

Respiratory Syncytial Virus (RSV) Results by Week

Influenza-like Illness Surveillance

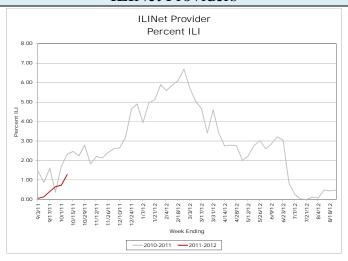

Respiratory Outbreaks in Long Term Care Facilities⁸

Cumulative outbreaks 2011-2012 season	0
No. outbreaks last 3 weeks	0
Regions with recent outbreaks	0

ILINet Providers

Additional Information

A second report containing information about age specific illness, hospitalization and deaths will be produced on a monthly basis or as needed when important information needs to be disseminated. For additional information regarding influenza surveillance please visit the following websites. http://nj.gov/health/flu/surveillance.shtml http://www.cdc.gov/flu/

Footnotes:

- 1. Influenza-like illness (ILI) is defined as fever (> 100oF [37.8oC], oral or equivalent) and cough and/or sore throat (in the absence of a known cause other than influenza). For long term care facilities, fever is defined as 2 degrees above baseline temperature.
- 2. Activity levels for the state and region are defined in Table 1 and 2 at the end of this document.
- 3. The following is a breakdown of counties contained within each public health region: Northwest: Morris, Passaic, Sussex, Warren; Northeast: Bergen, Essex, Hudson; Central west: Hunterdon, Mercer, Somerset; Central East: Middlesex, Monmouth, Ocean, Union; South: Atlantic, Burlington, Camden, Cape May, Salem, Cumberland, Gloucester
- 4. Non-season baseline is calculated by taking the average of statewide percentages of ILI for a 6 year (2006, 2007,2008, 2009, 2010, 2011) period during months when influenza is less likely to be circulating (May-August).
- 5. Three year seasonal averages are determined by calculating the average percent ILI/absenteeism for each influenza season (October to May). These averages are ranked and the three highest and lowest overall season averages were selected. The three highest and lowest numbers were then averaged to obtain a single high and single low value. The season which contribute to the high and low value vary by entity type and are as follows: LTCF (High: 05-06,06-07,07-08; Low: 08-09,09-10,10-11), ED (High: 05-06,06-07,09-10; Low: 07-08,08-09,10-11) and schools (High: 06-07,07-08,08-09; Low: 05-06, 09-10,10-11). A week by week average was also calculated using the average of the seasons listed above for each entity type.
- 6. Viral activity: Real-time polymerase chain reaction (PCR) results are obtained from electronic laboratory transmission submitted by acute care, commercial and public health laboratories to CDRSS. Rapid influenza test data and respiratory syncytial virus data are acquired from facilities reporting rapid influenza tests via the National Respiratory and Enteric Virus Surveillance System (NREVSS) or CDRSS ILI module. Counts for cumulative totals begin with week ending October 8, 2011. Data presented for RSV and rapid influenza testing represent information for the week prior to the current report week
- 7. Daily visits and admission associated with ILI from emergency department data is collected via EpiCenter and Hippocrates. Prior to these systems, data on ILI visits were only recorded one day per week usually on Tuesday. This system is maintained as a large amount of historical data allows for better seasonal comparisons.
- 8. Only LTCF outbreaks reported to NJDHSS that received and outbreak number are recorded in this report. Counts for cumulative totals begin with week ending October 8, 2011.

<u>Table 1</u> Influenza Activity Level – Definitions for State Activity								
NJ Level	CSTE Level	Definition						
		ILI Activity/Outbreaks		<u>Lab Activity</u>				
	No Activity	ILI activity at or below baseline AND no detected outbreaks	AND	No lab confirmed cases				
Low	Sporadic	Low ILI activity detected OR one lab confirmed outbreaks anywhere in the state	AND	Sporadic isolation of laboratory confirmed influenza				
	Local	Increase in ILI activity OR two or more lab confirmed outbreaks in one public health region (Other regions not experiencing increased ILI activity)	AND	Recent (within 3 weeks) laboratory activity in the region with increased ILI				
Moderate	Regional	Increase in ILI activity OR two or more lab confirmed outbreaks in at least 2 public health regions (Other regions not experiencing increased ILI activity)	AND	Recent (within 3 weeks) laboratory activity in the region with increased ILI				
High	Widespread	Increase in ILI activity OR two or more lab confirmed outbreaks in > 2 public health regions	AND	Recent (within 3 weeks) laboratory activity in the region with increased ILI				

Table 2 Influenza Activity Level – Definitions for Public Health Regions					
NJ Level	ILI Activity/Outbreaks	<u>inition</u>	Lab Activity		
Low	Low ILI activity detected OR one lab confirmed outbreaks anywhere in the region	AND	Sporadic isolation of laboratory confirmed influenza anywhere in the region		
Moderate	Increased ILI activity in less than half of the counties in the region OR two lab confirmed outbreaks in the public health region	AND	Recent (within 3 weeks) laboratory activity in same counties of the region with increased ILI		
High	Increased ILI activity in more than half of the counties in the region OR three or more lab confirmed outbreaks in the region	AND	Recent (within 3 weeks) laboratory activity in more than half of the counties in the region with increased ILI		

Notes:

ILI activity: Systems used to detect increases in ILI activity include: ILINet (i.e., sentinel providers), school absenteeism data, ED ILI visits and admission collected via Hippocrates and EpiCenter systems, LTCF ILI data, LTCF outbreak data, and information on influenza mortality (122 city, influenza associated death report).

Lab Activity: Virologic surveillance data from PHEL will be used as the primary data source for the above levels. However, rapid influenza test data and commercial laboratory data will also be considered when determining the appropriate activity levels.
