

New Jersey Department of Health and Senior Services Communicable Disease Service

Respiratory Virus Surveillance Report Week ending November 5, 2011 (MMWR week 44)

SYNOPSIS

| State Activity | March Morris | |
|----------------|--|----------------------------|
| Current wee | Hunter of the day of t | |
| Regi | Corington | |
| Northwest | LOW | CIOL PAIN |
| Northeast | LOW | Salem Attantio |
| Central West | LOW | Cumberland Capty May |
| Central East | LOW | $\boldsymbol{\mathcal{V}}$ |
| South | \mathbf{LOW} | |

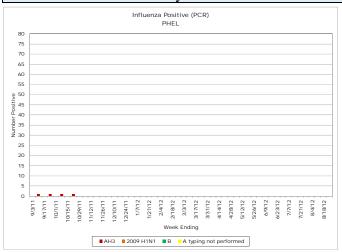

| ILI Activity | | | | | | |
|------------------------------|--------------------------------|---------------------------|--|----------------------|--|--|
| | P | Baselines | | | | |
| | Current week (range by county) | Last week Current year | Non-season ⁴ Season ⁵ (3 low, 3 high) | | | |
| Long Term Care Facilities | 0.45 (0.00-2.05) | 0.61 | 0.45 | 0.64 (0.66, 0.89) | | |
| Schools (absenteeism) | 5.69 (2.43-7.42) | 3.78 | 5.10 | 4.32 (4.86, 5.21) | | |
| Emergency Departments | 2.55 (0.00-5.36) | 2.49 | 2.38 | 2.68 (3.37, 3.89) | | |

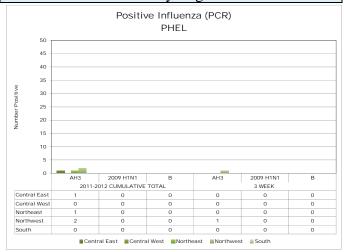

| Viral Activity ⁶ | | | | | | |
|----------------------------------|-----------------|-----------------|---------------------|--|--|--|
| | Current Week | Past 3 Weeks | Cumulative Total | | | |
| Influenza H1N1 (2009) | 0 | 0 | 0 | | | |
| Influenza H3N2 | 0 | 1 | 4 | | | |
| Influenza B | 0 | 0 | 0 | | | |
| Respiratory Synctial Virus (RSV) | 25 | 58 | 71 | | | |

Report also available at: http://nj.gov/health/flu/fluinfo.shtml

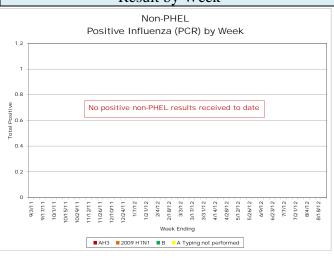

Virologic Surveillance⁶

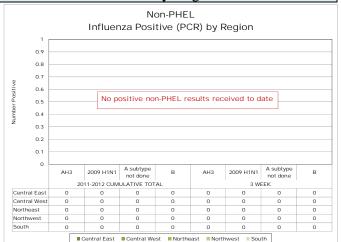

NJ Public Health and Environmental Laboratory (PHEL) Influenza Positive (PCR) Result by Week Result by Region³

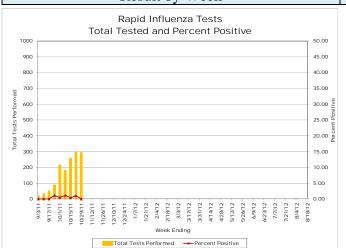

Influenza Positive (PCR) – Commercial/Acute Care Laboratories Result by Week Result by Region³

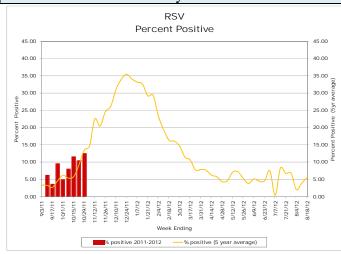

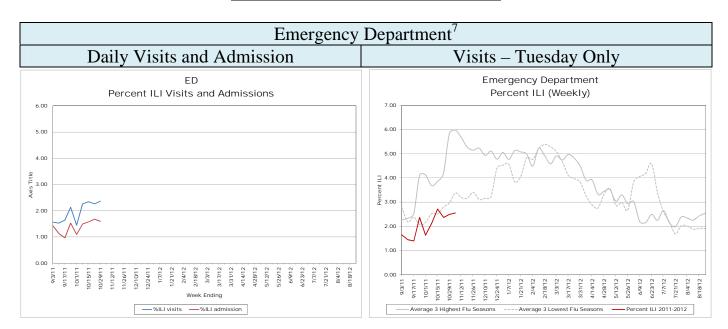

Influenza Rapid Antigen Result by Week

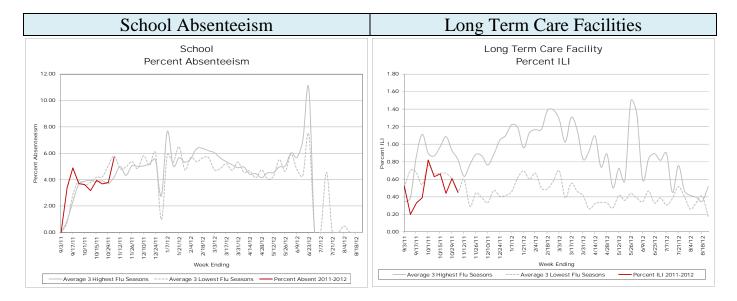

Respiratory Syncytial Virus (RSV) Results by Week

Influenza-like Illness Surveillance

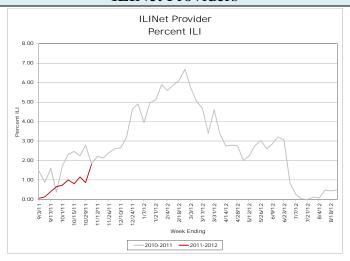

Respiratory Outbreaks in Long Term Care Facilities⁸

| Cumulative outbreaks 2011-2012 season | 1 |
|--|---|
| No. outbreaks last 3 weeks | 0 |
| Regions with recent | 0 |
| outbreaks | U |

ILINet Providers

Additional Information

A second report containing information about age specific illness, hospitalization and deaths will be produced on a monthly basis or as needed when important information needs to be disseminated. For additional information regarding influenza surveillance please visit the following websites. http://nj.gov/health/flu/surveillance.shtml http://www.cdc.gov/flu/

Footnotes:

- 1. Influenza-like illness (ILI) is defined as fever (> 100°F [37.8°C], oral or equivalent) and cough and/or sore throat (in the absence of a known cause other than influenza). For long term care facilities, fever is defined as 2° above baseline temperature.
- 2. Activity levels for the state and region are defined in Table 1 and 2 at the end of this document.
- 3. The following is a breakdown of counties contained within each public health region: Northwest: Morris, Passaic, Sussex, Warren; Northeast: Bergen, Essex, Hudson; Central west: Hunterdon, Mercer, Somerset; Central East: Middlesex, Monmouth, Ocean, Union; South: Atlantic, Burlington, Camden, Cape May, Salem, Cumberland, Gloucester
- 4. Non-season baseline is calculated by taking the average of statewide percentages of ILI for a 6 year (2006, 2007, 2008, 2009, 2010, 2011) period during months when influenza is less likely to be circulating (May-August).
- 5. Three year seasonal averages are determined by calculating the average percent ILI/absenteeism for each influenza season (October to May). These averages are ranked and the three highest and lowest overall season averages were selected. The three highest and lowest numbers were then averaged to obtain a single high and single low value. The season which contribute to the high and low value vary by entity type and are as follows: LTCF (High: 05-06, 06-07, 07-08; Low: 08-09, 09-10, 10-11), ED (High: 05-06, 06-07, 09-10; Low: 07-08, 08-09, 10-11) and schools (High: 06-07, 07-08, 08-09; Low: 05-06, 09-10, 10-11). A week by week average was also calculated using the average of the seasons listed above for each entity type.
- 6. Viral activity: Real-time polymerase chain reaction (PCR) results are obtained from electronic laboratory transmission submitted by acute care, commercial and public health laboratories to CDRSS. Rapid influenza test data and respiratory syncytial virus data are acquired from facilities reporting rapid influenza tests via the National Respiratory and Enteric Virus Surveillance System (NREVSS) or CDRSS ILI module. Counts for cumulative totals begin with week ending October 8, 2011. Three week count data includes current week and two prior weeks. Data presented for RSV and rapid influenza testing represent information for the week prior to the current report week.
- 7. Daily visits and admission associated with ILI from emergency department data is collected via EpiCenter and Hippocrates. Prior to these systems, data on ILI visits were only recorded one day per week usually on Tuesday. This system is maintained as a large amount of historical data allows for better seasonal comparisons.
- 8. Only LTCF outbreaks reported to NJDHSS that received an outbreak number are recorded in this report.

| <u>Table 1</u> Influenza Activity Level – Definitions for State Activity | | | | | | | | |
|--|-------------|---|-----|--|--|--|--|--|
| NJ Level | CSTE Level | <u>Definition</u> | | | | | | |
| | | ILI Activity/Outbreaks | | Lab Activity | | | | |
| | No Activity | ILI activity at or below baseline AND no detected outbreaks | AND | No lab confirmed cases | | | | |
| Low | Sporadic | Low ILI activity detected OR one lab confirmed outbreaks anywhere in the state | AND | Sporadic isolation of laboratory confirmed influenza | | | | |
| | Local | Increase in ILI activity OR two or more lab confirmed outbreaks in one public health region (Other regions not experiencing increased ILI activity) | AND | Recent (within 3 weeks) laboratory activity in the region with increased ILI | | | | |
| Moderate | Regional | Increase in ILI activity OR two or more lab confirmed outbreaks in at least 2 public health regions (Other regions not experiencing increased ILI activity) | AND | Recent (within 3 weeks) laboratory activity in the region with increased ILI | | | | |
| High | Widespread | Increase in ILI activity OR two or more lab confirmed outbreaks in > 2 public health regions | AND | Recent (within 3 weeks) laboratory activity in the region with increased ILI | | | | |

| <u>Table 2</u> Influenza Activity Level – Definitions for Public Health Regions | | | | | | | |
|---|---|-----|--|--|--|--|--|
| NJ Level | Definition Lab Activity | | | | | | |
| Low | Low ILI activity detected OR one lab confirmed outbreaks anywhere in the region | AND | Sporadic isolation of laboratory confirmed influenza anywhere in the region | | | | |
| Moderate | Increased ILI activity in less than half of the counties in the region OR two lab confirmed outbreaks in the public health region | AND | Recent (within 3 weeks) laboratory activity in same counties of the region with increased ILI | | | | |
| High | Increased ILI activity in more than half of the counties in the region OR three or more lab confirmed outbreaks in the region | AND | Recent (within 3 weeks) laboratory activity in more than half of the counties in the region with increased ILI | | | | |

Notes:

ILI activity: Systems used to detect increases in ILI activity include: ILINet (i.e., sentinel providers), school absenteeism data, ED ILI visits and admission collected via Hippocrates and EpiCenter systems, LTCF ILI data, LTCF outbreak data, and information on influenza mortality (122 city, influenza associated death report).

Lab Activity: Virologic surveillance data from PHEL will be used as the primary data source for the above levels. However, rapid influenza test data and commercial laboratory data will also be considered when determining the appropriate activity levels.
